Editor of *Journal of Mathematical Geology*: R. Ehrlich (USA)

Editor-in-Chief of *Computers & Geosciences*: D. F. Merriam (USA)
Editor of *Newsletter*: J. R. Carr (USA)

Publishing Office

Pergamon Press Ltd, Pergamon House, Bampfylde Street, Exeter EX1 2AH, England [Tel. Exeter (0392) 51558; Fax (0392) 425370].

Subscription and Advertising Offices

North America: Pergamon Press Inc., 660 White Plains Road, Tarrytown, NY 10591-5153, USA;
Rest of the World: Pergamon Press Ltd, Headington Hill Hall, Oxford OX3 0BW, UK [Tel. Oxford (0865) 794141].

Subscription Rates

Annual Institutional Subscription Rate (1993): £550.00 (US\$880.00). Sterling prices are definitive. US dollar prices are quoted for convenience only, and are subject to exchange rate fluctuation. Prices include postage and insurance and are subject to change without notice.

Back Issues

Back issues of all previously published volumes, in both hard copy and in microform are available direct from Pergamon Press offices.

Published Monthly except in February and November. Copyright © 1992 Pergamon Press Ltd

Second class postage paid at RAHWAY, NJ. Postmaster send address corrections to *Computers & Geosciences*, c/o Pergamon Press Inc., 660 White Plains Road, Tarrytown, NY 10591-5153, USA.

18 - YEAR CUMULATIVE INDEX

Edited by:

D.F. Merriam

**Stratigraphic Studies Group, Wichita State University,
Kansas, USA**

AIMS AND SCOPE

Computers & Geosciences serves as a public medium for the exchange of ideas between the geological and computer sciences. *Computers & Geosciences* brings to its readers computer programs, algorithms, computer-aided instructional material, programming guides and applications, and other topics of interest to geoscientists working with computers. The term Geoscience is used in its broadest sense, encompassing geology, geophysics, geochemistry, oceanography, hydrology, and geography. Papers will be concerned with the computational aspects of all subjects ranging from file maintenance and data processing to the latest problem-solving techniques. The publication is intended to serve workers in academia, industry, and government. Students, teachers, researchers, and practitioners should benefit from ideas in the journal.

In addition to longer papers containing programs, algorithms, or discussion of techniques, the journal will contain short notes with timely material, book reviews of pertinent publications, and a forum for exchange of ideas. Papers on comparative results and computer graphics are especially encouraged.

Published as Volume 18, Number 10 of the journal *Computers & Geosciences* and supplied to subscribers as part of their 1992 subscription. Also available to non-subscribers.

It is a condition of publication that manuscripts submitted to this journal have not been published and will not be simultaneously submitted or published elsewhere. By submitting a manuscript, the authors agree that the copyright for their article is transferred to the publisher if and when the article is accepted for publication. However, assignment of copyright is not required from authors who work for organizations which do not permit such assignment. The copyright covers the exclusive rights to reproduce and distribute the article, including reprints, photographic reproductions, microform or any other reproductions of similar nature, and translations. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, electrostatic, magnetic tape, mechanical, photocopying, recording or otherwise, without permission in writing from the copyright holder.

Photocopying Information for Users in the U.S.A. The Item-fee Code for this publication indicates that authorization to photocopy items for internal or personal use is granted by the copyright holder for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service provided the stated fee for copying beyond that permitted by Section 107 or 108 of the US Copyright Law, is paid. The appropriate remittance of US\$5.00 per copy per article is paid directly to the Copyright Clearance Center Inc., 27 Congress Street, Salem, MA 01970, U.S.A.

Permission for Other Use. The copyright owner's consent does not extend to copying for general distribution, for promotion, for creating new works or for resale. Specific written permission must be obtained from the publisher for such copying. *The Item-fee Code for this publication is:* 0098-3004/92 \$5.00 + 0.00.

DISCLAIMER

Whilst every effort is made by the publishers and editorial board to see that no inaccurate or misleading data, opinion or statement appears in this journal, they wish to make it clear that the data and opinions appearing in the articles and advertisements herein are the sole responsibility of the contributor or advertiser concerned. Accordingly, the publishers, the editorial board and editors and their respective employees, officers and agents accept no responsibility or liability whatsoever for the consequences of any such inaccurate or misleading data, opinion or statement.

INTRODUCTION

This index represents 18 years of effort in assembling, preparing, and publishing computer programs, applications, reviews, etc. for the earth sciences. During this time several other publications offering similar services to the profession have come and gone including *Geo-processing*, *COGS Programs*, and *Geobyte*. *Computers & Geosciences*, an outgrowth of *Special Distribution Publications* and later the *Computer Contributions* of the Kansas Geological Survey and then *Geocom Programs* (Merriam, 1992), has continued to expand and thrive. Every effort has and is being made to bring to the geological (in the broad sense of the word) community up-to-date, useful, and relevant computer software. As stated in the description of this international journal, it is '...devoted to the rapid publication of computer programs in widely used languages and their applications.'

A short history of *Computers & Geosciences* was given in the first issue of 1992 (v. 18) by Merriam. As

number of pages published which has increased from 356 in 1975 (v. 1) to 1500 in 1991 (v. 17). The true worth, of course, is in the value of the content, which is considerable if citations in the citation index is any criterion.

Payne and Merriam (1993) made a study from the citation index of *Computers & Geosciences* and its impact. They wanted to determine if specialized journals such as *Computers & Geosciences* are widely read. The assumption was that specialized journals are read only by those in the specific field and therefore the special journals have little impact outside their own area. They searched the ISI's Science Citation Index and from their analysis concluded that *Computers & Geosciences* was cited more than anticipated and that more authors outside the geosciences cited the journal than expected. These authors, however, are restricted to relatively few nongeological fields and write on computer subjects. Thus although the use of this specialized journal extends

Figure 1. Number of papers and Short Notes in *Computers & Geosciences* from 1975 (v. 1) to 1992 (v. 18).

the journal expanded in size and scope, the total number of papers each year increased (Fig. 1). There have been special issues containing shorter papers, many with no program listings, through the years where large numbers of papers were published. The index in the increase in size of the journal however is best expressed in the total

outside the subject field, it is used mostly by other specialists working in computer applications.

In addition to bringing to the audience computer programs, the journal has published many special conference proceedings and thematic issues. A list of these is given in Table 1. The latest one is this issue

containing the 18-year cumulative index.

There has been an evolution in the hardware during these 18 years from mainframes, minicomputers, PCs to workstations. The computer power has increased while

computer programming was provided by Burhanuddin Hussain.

This index is arranged in three sections. Part I is a listing by year, volume, and issue number of each paper.

Table 1. List of special issues of *Computers & Geosciences*

1976	Proceedings Fourth Geochautauqua on CAI—Syracuse University	v. 2, no. 1
1976	Proceedings Symposium on Capture, Management, and Display of Geological Data—Ecole des Mines de Paris	v. 2, no. 3
1977	Proceedings 5th Geochautauqua on Computer Software for the Geosciences—Syracuse University	v. 3, no. 3
1978	Proceedings 6th Geochautauqua on Quantitative Stratigraphic Correlation—Syracuse University	v. 4, no. 3
1980	Proceedings 7th Geochautauqua on Mathematical Models in the Earth Sciences—Syracuse University	v. 6, no. 2
1983	Proceedings 1st Mathematical Geologists of the United States, Annual Conference on The Management, Analysis, and Display of Geoscience Data—Golden, Colorado	v. 9, no. 1
1983	Proceedings IGCP Project 163—Igneous Petrology Database Design and Development—Hawaii	v. 9, no. 4
1984	Proceedings IGCP Project 148—Theory Application and Comparison of Stratigraphic Correlation Methods—Geneva, Switzerland	v. 10, no. 1
1985	Workshop on Thematic Mapping Using Microcomputers—University of Leicester	v. 11, no. 3
1986	Proceedings 14th Geochautauqua on Computer Applications in Petroleum Exploration and Development—Wichita State University	v. 12, no. 4B
1988	Merriam, D.F., Bibliography of Computer Applications in the Earth Sciences, 1948–1970	v. 14, no. 6
1989	Contributions of Institute of British Geographers on Fractals and the Geosciences—Portsmouth Polytechnic	v. 15, no. 2
1989	Proceedings NATO/ASI Conference on Statistical Methods for Resource Appraisal—Il Ciocco, Italy	v. 15, no. 4
1990	Artificial Intelligence Applications in Geoscience	v. 16, no. 6
1991	Special Review Issue	v. 17, no. 8
1992	GIS Design Models	v. 18, no. 4
1992	Geographical Computing	v. 18, no. 8
1992	18-year Cumulative Index	v. 18, no. 10

the physical size has decreased (Merriam, 1990). Palm-top computers of today are as powerful as mainframes just a few years ago. The trend of smaller and faster continues with the introduction of the new Pentium chip which makes the 486 chip look slow. A parallel evolution in languages is taking place (Cox, 1991). With the technical advances, the philosophy of computer programming is changing too. Programs now are likely to be modules of specific programs built into a system capable of processing almost unlimited amounts of data. The programs are user-friendly, fast, and sophisticated. Programs are available from many sources however *Computers & Geosciences* provides the user with programs usually developed for specific problem-solving purposes by researchers in the field. The variety has been great.

Computers & Geosciences, Journal of Mathematical Geology, and Nonrenewable Resources are sponsored by the International Association for Mathematical Geology (IAMG). The IAMG is proud of these efforts as the Association gets ready to celebrate its Silver Jubilee in 1993.

It is hoped that this index will facilitate the use of *Computers & Geosciences*. Every effort has been made to assure the correctness of the material presented. Lois Brane entered the information and helped check the accuracy of the material. Kathy Payne adapted the indexing program for this purpose and developed the layout and format for the presentation. She also contributed and helped in many other ways. Additional

Part II is an author index. Two-part surnames are indexed by the first name. For example, van Heflin would be indexed under v, Lloyd Weber under l. All forms of an author's names are listed together. An asterisk following a name refers to a first author. References are given for the year, volume number, issue number, and page number(s) of the paper. Refer to Part I for complete information. Part III is a keyword index. Keywords are those provided by the author, or in rare situations, the indexer.

No diacritical marks are used in this index.

COMPUTERS & GEOSCIENCES

GEOSCIENCE covers these areas—Geology, Geochemistry, Geophysics, Oceanography, Geography, Engineering and Applied Geology

Notes for Contributors

Papers are accepted for publication in *Computers & Geosciences* which are concerned with the application and use of computers in the earth sciences. Manuscripts should be original and submitted in duplicate on standard-size paper (8 × 10 in. or 8.5 × 11 in.), typed double-spaced on one side of the paper only and no longer than 5000 words. Where possible, the **Fax number of the corresponding author** should be supplied with the manuscript, for use by the publisher. Each manuscript is to be accompanied by the original drawings or good-quality prints for all illustrations. Color illustrations for the Journal are welcomed and will be published free of charge provided separations of sufficient quality are supplied. For authors who are unable to supply color separations, prices are available on application to: Pergamon Press Ltd, Pergamon House, Bampfylde Street, Exeter EX1 2AH, England [Telephone (0392) 51558; Fax 425370]. Computer printouts should be on unlined paper with good contrast of black print on white background. All papers are to have an abstract of no more than 300 words. A list of key words is to be supplied by the author. Papers of less than 1500 words may be considered as Short Notes and, therefore, do not need an abstract. Other instructions for manuscripts to be treated as Short Notes are the same as for longer contributions. Manuscripts should be sent to Dr D. F. Merriam, Stratigraphic Studies Group, Box 153, Wichita State University, Wichita, KS 67208, USA, or the most convenient Associate Editor.

Facilities are not available at present to process papers in languages other than English. No references are to be included in the abstract. References must be complete (including volume, issue number, and page range) and should be listed alphabetically at the end of the paper. In the text refer to them by author's name and year of publication. Footnotes should be used only if absolutely necessary.

All illustrations are to have precise captions typed on a separate sheet of paper; all symbols are to be explained; maps must have a scale, weights and measures should be expressed in the metric system. Illustrations are designated as figures, or plates if photographs. Tables replace text, not duplicate it. Original tables are required, and each table should be typed on a separate sheet of paper. For guidance on how best to prepare your tables for photographic reproduction, please contact the Reprographic Section of your institution, who will give you assistance. Tables, figures, and plates each should be numbered consecutively and referred to by number in the text and will be *directly reproduced*. Equations also should be numbered consecutively for text referral. All illustrative material submitted must be suitable for appropriate single column reproduction and must be labeled clearly and identified for ease in composition.

For general style and format, authors are referred to a recent issue of *Computers & Geosciences*.

Page proofs will be sent to the author (or the first-mentioned author in a paper of multiple authorship) for checking. **Corrections to the proofs must be restricted to printer's errors.** Any substantial alterations other than these may be charged to the author.

Authors are particularly requested to return their corrected proofs as quickly as possible in order to facilitate rapid publication. Please note that **authors are urged to check their proofs carefully before return, since late corrections cannot be guaranteed for inclusion in the printed journal.**

Reprints and copies of the issue (at a specially reduced rate) can be ordered on the form which will accompany the proofs. These should be returned to: Pergamon Press Ltd, Pergamon House, Bampfylde Street, Exeter EX1 2AH, England. The first-named author of each paper will receive 25 reprints free of charge.

All news items, letters to the editor, announcements, etc., to be placed in *Computers & Geosciences* may be submitted through any one of the Editors. Other Association business should be addressed to the Secretary-General, Dr M. E. Hohn, West Virginia Geological Survey, P.O. Box 879, Morgantown, WV 26505, USA.
